MAJOR SCIENTIFIC ACHIEVEMENTS

Diverse impactful research contributions during the past 5 years:

- Public sector corruption
- Publicness bias and sector-specific sentiment
- Dark sides of prosocial and public service motivation
- Dysfunctional risk behavior, trust, and defection in PPPs
- Challenges in human resource management
- Paradigm shifts in higher education

Introducing the Micro-Perspective on Deviant Behavior in the Sectoral Context

Public sector corruption and deviant behavior is a severe and unresolved issue worldwide, the micro-foundations of which are unexplored. As one of the central researchers in the field of behavioral public administration research, I pioneered experimental research into the psychological and motivational foundations that lead to corrupt and deviant behavior in the public sector.

First, I developed and validated a **novel quantitative measure for moral justification** of accepting the use of **bribery in civil service provision** ([De Waele, Weißmüller, & van Witteloostuijn, 2021](#)). Replicating experimental research in three countries (Belgium, Germany, and the Netherlands) provided the first evidence that the society-regarding motivational survey measure of Public Service Motivation (PSM) and the other-oriented motivational measure of Social Value Orientation (SVO) can help explain why some people are more *susceptible to engage in the act of bribing* than others and that – paradoxically – people with high SVO are more likely to engage in bribery. A second study in the context of public higher education revealed that these effects are aggravated by burnout ([Weißmüller & De Waele, under review](#)).

Second, I substantially contributed to the **dark sides of PSM** scholarship by revealing experimental cross-country findings that high-levels of PSM increase the likelihood of engaging in deviant rule-breaking in order to help clients perceived as deserving, with asymmetric **discrimination against clients** perceived as less likable. For this, I developed and validated a **novel measure for pro-social rule-breaking** intent ([Weißmüller, De Waele, & van Witteloostuijn, 2020](#)). Furthermore, I demonstrated that high-PSM individuals are more likely to **defect from well-functioning public-private partnerships** by deriving moral justification from their sectoral agency even to the detriment of the general public ([Weißmüller & Vogel, 2021](#)).

Third, to further conduct urgently needed **comparative research into deviant behavior** across the classic boundaries of administrative traditions, I **initiated an international research consortium** on public sector corruption (www.corpus-project.org), involving 21 researchers at 20 universities in 15 countries to conduct large-scale comparative research in both developed and transitional countries worldwide. Latest ongoing and experimental research presented at international conferences revealed that the phenomenon of civil servants deriving moral justification for **discriminatory and deviant behavior** from sector-specific context (public – private – hybrid context) and sector-specific motivations (PSM), indeed, **generalizes across countries** worldwide, pointing toward a deeply rooted psychological effect. These are extraordinary theoretical and empirical contributions which are highly relevant for policy makers and public managers worldwide.

Exploring the Role of Publicness and Sector-specific Sentiment as Behavioral Biases

I **pioneered the method of affective sentiment coding** as a reliable method of **revealing implicit associations and biases** toward the public and the private sector as well as **civil servants' perception of self** ([Weißmüller & Rometsch, under review](#)). In addition to being the first scholar to introduce the Centipede game in public administration research, I used **affective sentiment coding** to demonstrate that anti-public sentiment affects public and private agents' **strategic risk behavior** in public-private partnership ([Weißmüller & Vogel, 2021](#)) and also negatively affects partners' negotiation strategies in public-private partnerships ([Weißmüller, Bouwman, & Vogel, forthcoming](#)).

Furthermore, I **introduced the use of psychometric measurements of probability and delay discounting** in public administration research, programming easy to use software to facilitate the use of these measures for other scholars. In a sectoral framing experiment on risk and delay discounting, I was the first to demonstrate that civil servants are more likely to **overestimate risks and tolerate delay** in rewards compared to the general population, providing evidence on the link between **public sector socialization and dysfunctional behavior** ([Weißmüller, 2021](#)). These findings are particularly concerning for the efficiency and equity of public bureaucracies since recent experimental research on error coping revealed that civil servants' response to **violating procedural bureaucratic rules** (i.e., fixing and reporting errors) is mainly driven by their risk propensity ([Fischer & Weißmüller, under review](#)), and dysfunctional personnel policies and self-selection result in a large homogeneous public workforce susceptible to group think ([Seidemann & Weißmüller, under review](#)). All in all, these **novel and ground-breaking findings** call into question basic assumptions about rational behavior in sectoral context, seeking to inform policy makers about the critical role of sector-specific sentiment and publicness as **potential biases for behavior**.
